*This book is definitely not straightforward to get started on studying but extremely exciting to read. It is really simplistic but shocks in the 50 percent of the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.*

Subjects are male, varying in chronological age, with an occasional exception, from sixteen to thirty inclusive. The examination was given as soon after their arrival at the Institution as was deemed advisable for the best results. Usually a period of three weeks elapsed before the examination was given. This gave ample time for rest and composure and has proved satisfactory. As far as possible, the examination was avoided when the subject was for any reason, whatsoever, physically unfit. Ordinarily only one examination was given each subject, but, if for any reason, the first was unsatisfactory, then one or more subsequent examinations were given. In conjunction with the regular mental investigation, a detailed statement of personal, hereditary, and environmental data was obtained. This not only aided materially in a correct mental diagnosis, but was of immediate value to the Institution. The plan of this paper is two-fold; first to suggest what we have found to be some of the more valuable psychological tests for mental diagnosis, especially for adults and those nearing that age, and give our method of evaluating them; secondly, to present as concisely as possible a statistical resume of results obtained. Not only have we been dealing with a cosmopolitan group of individuals of every race and tongue, but among the two thousand subjects, we have had...
