

Experiments in Physics, for Students of Science and Engineering

By Ernest Blaker

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1905 edition. Excerpt: . the distance from the upper fixed end to the fingers corresponds to nearly a half wave length; when vibrating in two segments the distance corresponds to a whole wave length; and when vibrating in three segments it corresponds to one and a half wave lengths. Since in the formula $v=f\lambda$, where v is the velocity of propagation, λ the wave length, and f the frequency; v is constant, show the relation between λ and f in any set of observations. In paragraphs 275 and 276 (Watson's Physics) it is shown that $T \propto \sqrt{\lambda}$; that is, that v varies with the square root of the tension. Verify this from the data taken. Take the suspended mass off and from the upper end of the rope produce stationary waves having one, two and three nodes between the upper and lower ends, note...

Reviews

A top quality publication along with the font used was intriguing to read. I really could comprehend everything using this written ebook. Its been designed in an remarkably straightforward way and it is only after i finished reading through this publication by which basically altered me, modify the way i believe.

-- **Cathrine Larkin Sr.**

Very useful to all of group of people. I actually have read through and so i am certain that i will planning to study yet again once again down the road. I am just very easily can get a satisfaction of looking at a created book.
